

Heating

In Hungary the energy/heating/ costs are high, for we do not have our own resources.

Please note that the heating season is starting after October 15th and only if the average daily temperature/measured in 24 hours/ drops under 14 C.

We will in this case heat only some apartments in Szentkiralyi utca 5.

We are informing you that those are cool, it takes 3-12 hours to be warm enough.

That is why you are requested **to make a reservation without credit card** in the heating season.

The apartments, where guest stays, are automatically heated by gas to 20 C (not like in Switzerland 18 C!).

The main flame of the gasheater will be on if both the circulating water temperatur and the thermostat temperatur drops under the set value.

If you want to change the set value up to 22 C, we charge you 5 % surcharge.

But our additional costs will by far exceed this.

If there is no termometer in the apartment, please come to our office in order to get one to check the temperatur in the apartment.

Each apartments has a separate automatic heating unit.

Please do not touch any automatic heating system, because it will not work /properly/ after.

Please take into consideration that we are not able to use subsidizes.

We hope on your understanding.
